

MILAN SCHOOL OF MEDICINE

## THE PERSON CENTERED MEDICINE INTERNATIONAL ACADEMY

Person Centered Medicine is an historical revolution of health sciences, and needs particular efforts for its diffusion all over the world.

The Person Centered International Academy (PCIA) is an educational and scientific structure founded in 2010 by [Ambrosiana University](#), member of the [Person Centered Medicine International Network](#) with the sponsorship of the [Hospitalier Order of St John of God](#) which from the XVI Century, founded a “Sick Person Centered Hospitality” leading to a revolution of the hospital assistance, and founding it on the conception on the human affective and spiritual “Brotherwood” between physicians , health professionals and sick persons.

The Person Centered Medicine International Academy is born from the work and educational programs in Person Centered Medicine (PCM) of Ambrosiana University Milan School of Medicine on the proposal of its Rector, Giuseppe Rodolfo Brera, father of the PCM theory and from the leading concept

of the Hospitalier Order of St. John of God, “Medicine humanization” promoted by General Br. Pierluigi Marchesi, and from the cultural stimulus of the Person Centered Medicine International Network. The PCMIA wants to re-orient medical education, research and application to the noble Medicine fundamentals: truth and an universal free care of sick persons particularly children, adolescents, old people, whose life must be respected from conception to death. We recognize and trust that this humanity assume a divine institution by Jesus Christ’s Good Samaritan Parable and by the Hospitalier Order’s founder: St John of God.

According GR Brera’s Person Centered Medicine re-foundation, Medical Science is seen not as a technique but as a person’s revelation : “Ecce homo” and suffering as a “pathos”, open possibility to change life quality and values, which calls for an existential change addressed to build a new person reality based on Truth, Love and Beauty.

In the light of the indeterminist epistemological changes of Medical Science there is the necessity that physicians and health operators learn the “Person Centered Clinical Method”, that allows the person’s disclosure to interpret and experience himself as made for an harmonious three-dimensional unity : Spirit ( answering a meaning question-values ), Body (biological variables), Mind ( subjective symbolic world). The health professionals-patient relationship must open to life change and to a new quality not to close in the disease.

The Academy wants to spread all over the world methods, application and research in Person Centered Medicine, promoting education and research.

**The working site of the Person Centered International Academy courses and meetings is in Monguzzo Castle, the historical Lombardo Veneto Province of the Hospitalier Order venue, addressed to promote a human health culture, today symbol of the noble and non negotiable mission of caring for the sick person, at every stage of his life from conception to natural death, of every race, nation religion or ideology, the weakest of the world.**
